LEARNING OUTCOMES

Associate in Applied Science (AAS)
Program: Nursing

Upon completion of this program, students will be able to:

1. Practice professional nursing behaviors and skills incorporating personal responsibility and accountability consistent with the Standards of Practice, and the Nursing Code of Ethics as designated by the American Nurses Association, and the scope of practice identified by the State Board of Nursing.

2. Communicate professionally and effectively with individuals, significant support person(s), and members of the interdisciplinary healthcare team.

3. Integrate knowledge of holistic needs of the individual across the lifespan in diverse settings by incorporating evidence-based practice in application of the nursing process.

4. Incorporate informatics to formulate evidence-based clinical judgments and management decisions.

5. Apply the nursing process and incorporate teaching and learning principles to develop a plan that addresses the educational needs of individuals, significant support person(s), members of the interdisciplinary healthcare team, and the community at large.

6. Collaborate with the interdisciplinary healthcare team to advocate for positive individual and organizational outcomes.

7. Manage health care for the individual using safe, cost-effective nursing strategies, quality improvement processes, and current technology.

8. Demonstrate an awareness of national versus local trends of wellness and illness and their impact on nursing practice.
